Let's Start!

Can studying make you sick?

Learning Outcome

Describe unusual events through a wider range of B1 language in both work and social contexts.

Ask your partner:

- How do you feel before a big test or interview?
- Do you think that there is a connection between stress and illness? What's the connection?

Can Do Statements

- I can talk about staying healthy.
- I can express possibility and certainty.
- I can talk about things I am supposed to do and things that are supposed to happen.

Let's Explore!

Let's read about the link between stress and health. What is the impact of **anxiety*** on the brain?

* "Anxiety" releases chemicals in the brain.

Instructions: Read the text aloud.

A ten-year-old pupil who was disappointed in her grades responded to her report card by saying, "I'm so sad, I might get the flu." The teacher's reply was, "Don't be silly. Sadness isn't supposed to make you sick." It may be that the teacher knew less about the complex human body than her pupil.

Recent research has shown that there could be a direct link between people's emotional state and their physical well-being.

Research conducted at a University in Ohio showed that anxiety caused before a final exam of medical students affected their immune system. The degree of activity of the cells that fight disease (white blood cells) was much lower on the day of the exam. Another research project showed that college students who felt lonely or upset had three times less activity of the white blood cells.

It seems that certain chemicals from the brain can lower the power of the immune system. These chemicals are supposed to be released when one is suffering from anxiety. If this explanation is supported by further research, our teacher will be proven wrong. An upset pupil would certainly be more likely to get the flu!

What does this mean? We are supposed to take care not only of our physical health but also our emotional health. Teachers have to consider the impact that stress has on students' performance. Students must also take good care of their physical and mental health if they want academic success.

Let's Practice!

Do you ever get stressed and then have bad academic results?

Instructions: Read the text again. Select all the correct answers.

1. Which of these sentences are true?

- a) People's emotional state is supposed to be related to their physical well-being.
- b) People's immune system is supposed to be affected by anxiety.
- c) Some chemicals from the brain are not supposed to lower the power of the immune system.
- d) Teachers are not supposed to give much importance to stress on students' performance.
- e) Students are supposed to balance mental and physical health to get good results.

Let's Practice!

Sally has to check the right words to use in this blog entry.

Instructions: Read the words and find them in the wordsearch below.

Word Bank

- pupil
- well-being
- immune system
- white blood cells
- complex
- academic

Extension Activity

Let's look at idioms about health and happiness.

Instructions: Complete the following steps. Fill in the Self-Assessment.

- Go online and find 10 idioms about health and/or happiness.
- Write them down and choose your favorites.
- Share them with a partner.
- Ask your partner to guess the meaning of your favorite idioms.
- Try to use them in conversation.

Self-Assessment

Yes

No

I identify idioms about health and happiness.

☐ ☐

I choose my favorite idioms.

☐ ☐

I share them with a partner.

☐ ☐

I talk about health and happiness.

☐ ☐

Target Words

- **complex** (adjective): complicated; difficult to understand
e.g. The teacher knew little about the complex human body.
- **pupil** (noun): a student, usually in elementary or primary school
e.g. A pupil was disappointed in her grades.
- **link** (noun): a connection
e.g. There could be a direct link between physical and emotional health.
- **well-being** (noun): good state of health and happiness
e.g. People's emotional state is supposed to be related to their physical well-being.
- **immune system** (noun): the different components of the body that need to work together to keep a person's good health
e.g. Anxiety caused before a final exam might affect a person's immune system.
- **degree** (noun): level; grade
e.g. The degree of activity of white blood cells was lower.
- **white blood cell** (noun): the microscopic components of your body that help to fight diseases
e.g. White blood cells had a lower activity on an exam day.
- **academic** (adjective): relating to school subjects that teach intellectual skills
e.g. For academic success, students must take care of their physical and mental health.

Learning Points

Be Supposed To

You use the structure **be supposed to** when you want to talk about expectations, obligations or arrangements.

You can use **be supposed to** to talk about situations in the past, present or future.

The structure is:

Subject + *To be* + *supposed to* + verb

*We are **supposed to take care of** not only our physical health but also our emotional health.*

****Pronunciation tip**:**

When you say *be supposed to*, you link the /d/ and /t/ sounds together.

Like this: *Be suppose_to*

Examples:

- *Sadness isn't supposed to make you sick.*
- *These chemicals are supposed to be released when one is suffering from anxiety.*
- *We are supposed to take care of not only our physical health but also our emotional health.*

Learning Points

Modals for Suggestions, Necessity and Possibility

You use modals to talk about degrees of certainty, possibility and necessity.

You use them to describe what is definite, probable, possible, or impossible from the speaker's point of view.

You can think of modals as “helping verbs”. They add meaning to the main verb of a sentence.

Modals talking about **suggestions** are:
could, can and should.

*You **could take** some medicine to feel better.
You **should get** some rest before a test.*

Modals talking about **necessity** are:
must, have to, had better and ought to.

*Teachers **have to consider** the impact that stress has on students' performance.
Students **must also take** good care of their physical and mental health if they want academic success.*

Modals talking about **possibility** are:
could, may and might.

*I'm so sad, I **might get** the flu.
Recent research has shown that there **could be** a direct link between people's emotional state and their physical well-being.*
